

# Protocols

This section contains the specification of protocols used by both E-SDCs and POSes

1.

## [TaxCore.Api](#)

TaxCore.API is designed to expose its functionalities to all external systems.

2.

## [POS to SDC Protocol](#)

This section describes API exposed by V-SDC and all accredited E-SDC devices and applications to POS and invoicing systems.

# TaxCore.Api

## Introduction

TaxCore.API is designed to expose its functionalities to all external systems.

It enables integration of POSes, E-SDCs, accreditation tools and other clients that makes TaxCore ecosystem.

API documentation design is based on OpenAPI-Specification V2 (<https://github.com/OAI/OpenAPI-Specification>). You can use OpenAPI-Specification code generators (e.g. <https://swagger.io/tools/swagger-codegen>) to quickly build a proxy library for almost any programming language and platform.

### NOTE:

Development, testing and technical review are all done in the Sandbox environment. The next step is the administrative review process which enables getting accreditation for a specific country. Different countries have different system names, and every environment has its own URL.

## Content

1.

### [Obtain a URL of the TaxCore.API Service from Digital Certificate](#)

TaxCore.API service provides the configuration information of the current environment. In order to access it, one must obtain URL of the TaxCore.API service from Secure Element digital certificate. This procedure applies to any type of Secure Element.

2.

### [Configuration](#)

Every TaxCore.API instance provides services anyone can use to gather information about current environment and all available environments from the current node.

## Obtain a URL of the TaxCore.API Service from Digital Certificate

### Introduction

TaxCore.API service provides the configuration information of the current environment. In order to access it, one must obtain URL of the TaxCore.API service from Secure Element digital certificate. This procedure applies to any type of Secure Element.

### How to obtain TaxCore.API URL

TaxCore.API URL is stored in a digital certificate of Secure Element as the value of OID. OID is dynamically created when Secure Element is issued and depends on the target environment. For example, Test and Production environments will have different OIDs, so that digital certificate issued for one environment cannot be used for any purpose in another environment. Follow the steps to read the OID value from the digital certificate installed on your computer:

1. Open the certificate installed on your computer
2. In the **General** tab, your certificate should have OID in this format **1.3.6.1.4.1.49952.X.Y.3.7**
3. **X and Y parameters identify the environment and their values change according to each environment.**

Certificate

[General](#) [Details](#) [Certification Path](#)**Certificate Information****This certificate is intended for the following purpose(s):**

- Proves your identity to a remote computer
- 1.3.6.1.4.1.49952.5.7.4.1
- 1.3.6.1.4.1.49952.5.7.3.7

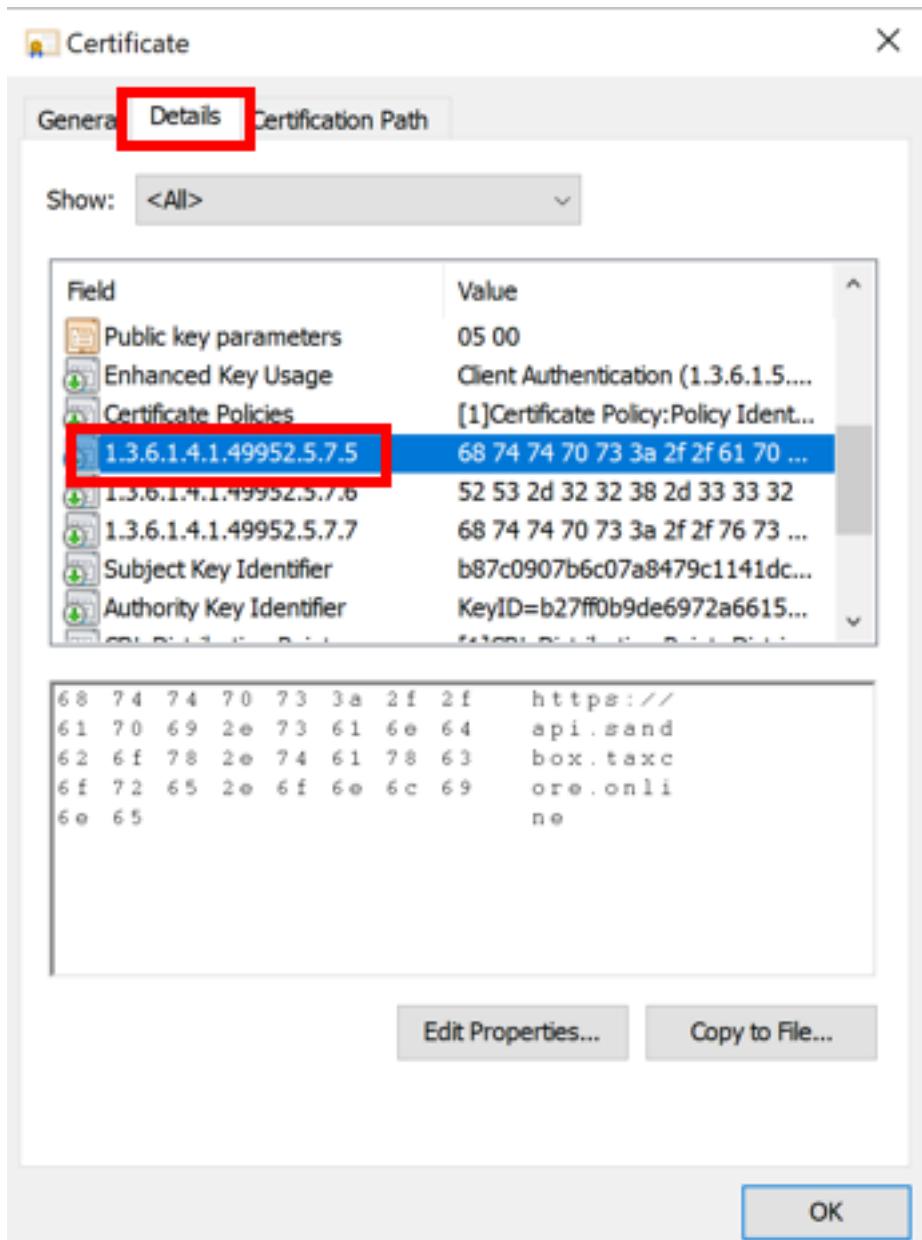

\* Refer to the certification authority's statement for details.

**Issued to:** BEUJ New Beginning**Issued by:** Taxcore Online Sandbox Issuing CA 1**Valid from** 4/1/2021 **to** 4/1/2024

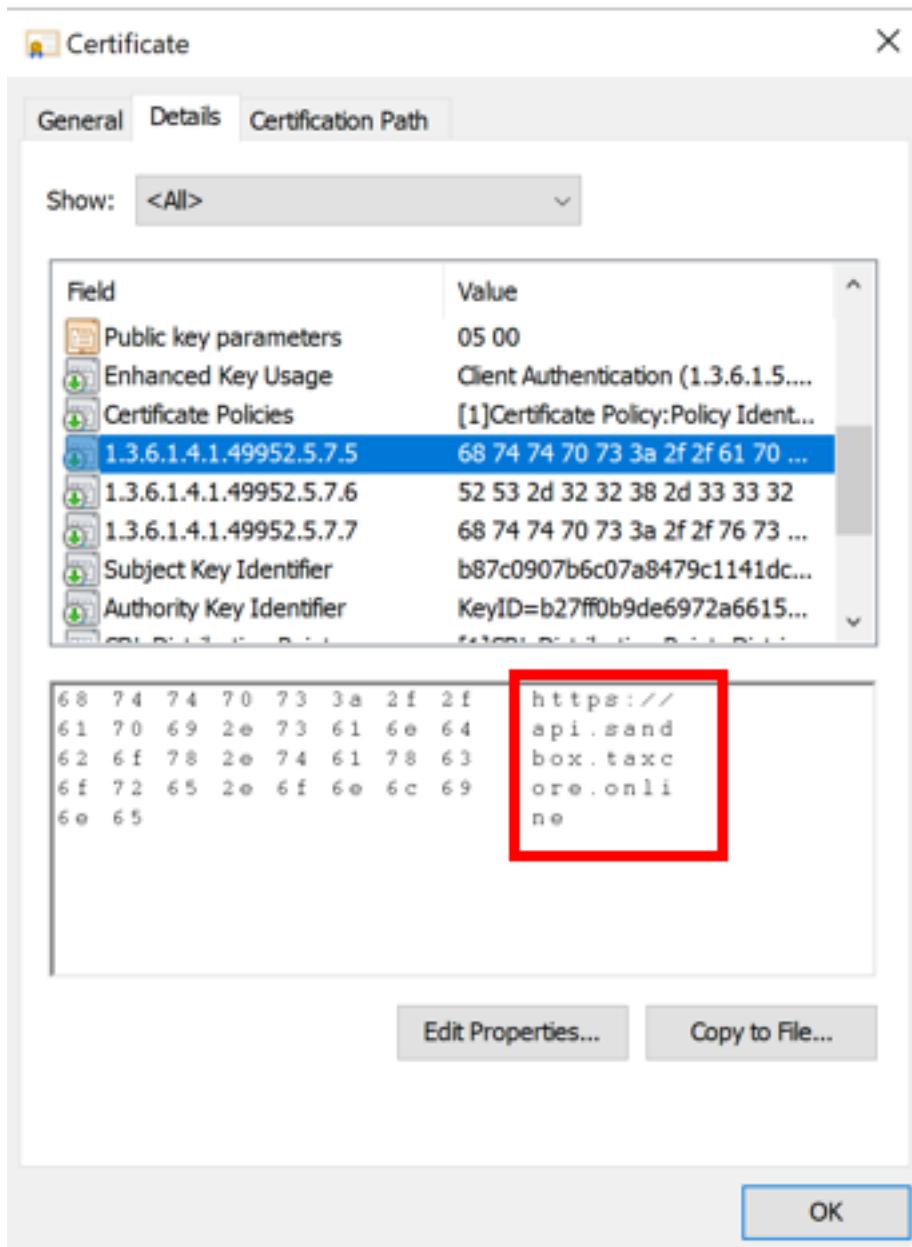

You have a private key that corresponds to this certificate.

[Issuer Statement](#)[OK](#)

4. Click on the **Details** tab and find the line with an OID in this format - **1.3.6.1.4.1.49952.X.Y.5**

5. Again, **X and Y parameters identify the environment**, and the **values will vary according to different environments**, but they will be the same as on the **General** tab
6. Number **5** at the end identifies the TaxCore.API URL
7. Read the value of this OID containing root URL of TaxCore.API Service

In case Secure Element is in Smart Card format, URL of TaxCore.API services can be obtained at runtime using [Export Certificate APDU command](#), which returns digital certificate in DER format.

## Configuration

### Introduction

Every TaxCore.API instance provides services anyone can use to gather information about current environment and all available environments from the current node.

These services should be used by all POS and E-SDC implementations to gather environment information and to simplify technical review, accreditation, deployment and usage in various jurisdictions.

### Content

1.

### [Configuration](#)

This service returns information about environment configuration.

2.

### [Tax Rates](#)

This service returns information about defined tax rates for the environment.

3.

### [Environments](#)

This service returns a list of all available environments from the TaxCore.API.

4.

### [Encryption Certificate](#)

This service returns the public key of the TaxCore.API which can be used for encryption.

# Configuration

This service returns information about environment configuration.

#### **NOTE:**

The same parameters can also be obtained from any SDC device (E-SDC or V-SDC) which is the preferred option for obtaining this information - see [POS to SDC Protocol](#).

## Endpoint

Endpoint	Example
<TaxCore_API_URL_obtained_from_certificate_as_explained <a href="#">here</a> >/api/v3/configuration	<a href="https://api.sandbox.suf.purs.gov.rs/api/v3/configuration">https://api.sandbox.suf.purs.gov.rs/api/v3/configuration</a>

#### **NOTE:**

Development and production environments, as well the environments in different countries, have different URLs. For this reason, URLs and names in your documentation, code and UI should not be hardcoded but configurable or extracted from a digital certificate.

## HTTP Method

GET

# Authentication

No authentication

## Response

Field	Description
<b>organizationName</b>	Name of the tax authority organization
<b>serverTimeZone</b>	Time zone of the server location
<b>street</b>	Tax authority street address
<b>city</b>	Tax authority city
<b>country</b>	Tax authority country
<b>endpoints</b>	List of available endpoints
<b>environmentName</b>	Name of the environment
<b>logo</b>	Link to the tax authority's official logo
<b>ntpServer</b>	NTP server used for time synchronization
<b>supportedLanguages</b>	List of language-culture strings supported by TaxCore

## Example

```
{  
  "organizationName": "Data Tech International",  
  "serverTimeZone": "Fiji Standard Time",  
  "street": "Kruzni put 7",  
  "city": "Belgrade",  
  "country": "RS",  
  "endpoints": {  
    "taxpayerAdminPortal": "https://tap.sandbox.taxcore.dti.rs:443/",  
    "taxCoreApi": "https://api.sandbox.taxcore.dti.rs:443/",  
    "vsdc": "https://vsdc.sandbox.taxcore.dti.rs:443/",  
    "root": "https://frontendui.sandbox.taxcore.dti.rs:443/v/?vl="  
  },  
  "environmentName": "SANDBOX",  
  "logo": "https://i.imgur.com:443/tg5ad60.png?hash=1174511688",  
  "ntpServer": "http://0.europe.pool.ntp.org:80/",  
  "supportedLanguages": [  
  ]}
```

```
        "en-US",
        "sr-Cyrl-RS"
    ]
}
```

# Tax Rates

This service returns information about defined tax rates for the environment.

## NOTE:

The same parameters can also be obtained from any SDC device (E-SDC or V-SDC) which is the preferred option for obtaining this information - see [POS to SDC Protocol](#).

## Endpoint

Endpoint	Example
<TaxCore_API_URL_obtained_from_certificate_as_e: <a href="#">here</a> >/api/v3/tax-rates	<a href="https://api.sandbox.suf.purs.gov.rs/api/rates">https://api.sandbox.suf.purs.gov.rs/api/rates</a>

## NOTE:

Development and production environments, as well the environments in different countries, have different URLs. For this reason, URLs and names in your documentation, code and UI should not be hardcoded but configurable or extracted from a digital certificate.

## HTTP Method

GET

# Authentication

No authentication

## Response

Field	Description
<b>currentTaxRates</b>	The currently active tax rate group.

**allTaxRates**

All tax rate groups ever used for the environment - can be used for reference when issuing refunds. Also includes all approved future tax rate groups, with the date of their activation.

## Example

```
{  
  "currentTaxRates": [  
    {  
      "validFrom": "2020-08-03T12:56:56",  
      "groupId": 2,  
      "taxCategories": [  
        {  
          "name": "ECAL",  
          "categoryType": 0,  
          "taxRates": [  
            {  
              "rate": 5,  
              "label": "D"  
            },  
            {  
              "rate": 11,  
              "label": "F"  
            }  
          ],  
          "orderId": 1  
        },  
        {  
          "name": "N-TAX",  
          "categoryType": 0,  
          "taxRates": [  
            {

}
]
}
]
}
}

```

## Environments

This service returns a list of all available environments from the TaxCore.API.

**NOTE:**

The same parameters can also be obtained from any SDC device (E-SDC or V-SDC) which is the preferred option for obtaining this information - see [POS to SDC Protocol](#).

## Endpoint

Endpoint	Example
<TaxCore_API_URL_obtained_from_certificate_as_explained <a href="#">here</a> >/api/v3/environments	<a href="https://api.sandbox.suf.purs.gov.rs/api/v3/environments">https://api.sandbox.suf.purs.gov.rs/api/v3/environments</a>

**NOTE:**

Development and production environments, as well the environments in different countries, have different URLs. For this reason, URLs and names in your documentation, code and UI should not be hardcoded but configurable or extracted from a digital certificate.

## HTTP Method

GET

## Authentication

No authentication

## Response data

Field	Description
<b>name</b>	Name of the TaxCore environment
<b>url</b>	Root Url of the TaxCore environment. You can construct other well-knownUrls using this value. For Example, <code>api.sandbox.taxcore.online</code> and <code>vscd.sandbox.taxcore.online</code>
<b>description</b>	Description of the environment. For example, "for accreditation purposes only"
<b>environmentName</b>	For internal use only

## Example (not specific for any environment)

```
[  
  {  
    "name": "Sandbox",  
    "url": "sandbox.taxcore.online",  
    "description": "",  
    "environmentName": "SANDBOX"  
  }  
]
```

## Encryption Certificate

This service returns the public key of the TaxCore.API which can be used for encryption.

## Endpoint

Endpoint	Example
<TaxCore_API_URL_obtained_from_certificate_as_e>	<code>https://api.sandbox.suf.purs.gov.rs/api/`</code>

**NOTE:**

Development and production environments, as well the environments in different countries, have different URLs. For this reason, URLs and names in your documentation, code and UI should not be hardcoded but configurable or extracted from a digital certificate.

## HTTP Method

GET

# Authentication

No authentication

## Response data

Response contains Base64 encoded raw data of TaxCore.API X509 public key certificate used for encryption.

## Example

```
"MIIFF8TCCBNmgAwIBAgIOH2Jcu+Xv118AAAAAJN4wDQYJKoZIhvCNQELBQAwp

# POS to SDC Protocol

This section describes API exposed by V-SDC and all accredited E-SDC devices and applications to POS and invoicing systems.

[Create Invoice](#) command is the same for both V-SDCs and E-SDC thus simplifying implementation of POSEs. Some other services defined in this section are specific to either V-SDC or E-SDC implementations because they cater for differences between Connected and Semi-Connected modes of operation and specifics of authentication and authorization.

## Network Connectivity of E-SDCs

E-SDC device shall be equipped with an Ethernet port or a Wireless controller in accordance with IEEE 802.3, with speed no less than 100Mb/s, in order to access a local area network.

The physical connection to a network can be established with a standard LAN cable, Cat.5 or similar with better features. The ends of the cables shall be equipped with RJ-45 plug male connectors since an E-SDC is equipped with a female RJ-45 connector.

E-SDC shall have a globally unique MAC-48 address in accordance with IEEE 802, which is stored on a specialized MAC Address chip, or an address obtained by the authorized vendor stored in the non-volatile memory during the manufacturing.

IP Address and other network settings on an E-SDC shall be configurable. The technical implementation of these features is in the scope of the E-SDC manufacturer.

## Content

1.

### [Get Environment Parameters](#)

This service returns information about environment configuration. The same parameters can also be obtained directly from TaxCore.API with more accuracy, as SDCs' accuracy depends on their synchronization frequency. The fields list in Response can grow, adding additional information, so integrators should keep that in mind.

2.

### [Attention](#)

This command is used by POS to verify if E-SDC is available. The command is used prior to Sign Invoice or Send Pin requests. This significantly lowers the possibility of communication errors, including timeout errors. Only if a valid response is received, the POS immediately sends the next command.

3.

### [Get Status](#)

This service is used to get status information from SDC.

4.

#### [Verify PIN](#)

This service is used to verify a PIN entered by a cashier on a POS. Once the PIN is entered, it is validated using the Secure element on a smart card. The request is sent as plain text and the response is plain text (still application/json HTTP header must be provided).

5.

#### [Create Invoice](#)

This section contains the description of the **Create Invoice** command.

6.

#### [Get Last Signed Invoice](#)

Get the last signed invoice by `RequestId`. It is used in case POS did not get a response from E-SDC after the [Create Invoice](#) service was invoked. The response is the same as for the Create Invoice service.

`RequestId` field from the request is used to determine whether the last invoice was successfully created.

7.

#### [Error Messages Format](#)

This section describes the structure and format of error messages that SDC returns to POS.

8.

#### [Status and Error Codes](#)

All protocols share the same Info, Error and Warning codes.

## Get Environment Parameters

This service returns information about environment configuration. The same parameters can also be obtained directly from TaxCore.API with more accuracy, as SDCs' accuracy depends on their synchronization frequency. The fields list in Response can grow, adding additional information, so integrators should keep that in mind.

#### **NOTE:**

Development, testing and technical review are all done in the Sandbox environment. The next step is the administrative review process which enables getting accreditation for a specific country. Different countries have different environment names, and every environment has its own URL (see [Environments](#)). For this reason, URLs and names in your documentation, code and UI should not be hardcoded but configurable or extracted from a digital certificate.

SDC	Endpoint	Example
V-SDC	<V- SDC_API_URL_obtained_from_certificate_as_exp	[ __TaxCore.PublicConfiguration.Vsdca <sup>parameters</sup>

[here](#)>/api/v3/environment-parameters

<b>E-SDC</b>	http://<ESDC_ip_address>:<ESDC_port>/api/parameters	http://192.168.88.112:8888/api/v3/environment-parameters
--------------	---	--

## HTTP Method

GET

## Header

Add following HTTP headers to each request

- Accept: application/json
- PAC: <PAC\_value> (PAC value for the provided client authentication certificate - **only for V-SDC**)

## Authentication

### V-SDC

Use client digital certificate for authentication with each request to V-SDC.Api.

### E-SDC

E-SDC does not require client authentication.

## Response

Field	Description
<b>organizationName</b>	Name of the tax authority organization
<b>serverTimeZone</b>	Time zone of the server location
<b>street</b>	Tax authority street address
<b>city</b>	Tax authority city
<b>country</b>	Tax authority country
<b>endpoints</b>	List of available endpoints

<b>environmentName</b>	Name of the environment
<b>logo</b>	Link to the tax authority's official logo
<b>ntpServer</b>	NTP server used for time synchronization
<b>supportedLanguages</b>	Supported language(s) for the environment

## Example (not specific for any environment)

```
{
  "organizationName": "Data Tech International",
  "serverTimeZone": "Fiji Standard Time",
  "street": "Kruzni put 7",
  "city": "Belgrade",
  "country": "RS",
  "endpoints": {
    "taxpayerAdminPortal": "https://tap.sandbox.taxcore.dti.rs:443/",
    "taxCoreApi": "https://api.sandbox.taxcore.dti.rs:443/",
    "vsdc": "https://vsdc.sandbox.taxcore.dti.rs:443/",
    "root": "https://frontendui.sandbox.taxcore.dti.rs:443/v/?vl="
  },
  "environmentName": "SANDBOX",
  "logo": "https://i.imgur.com:443/tg5ad60.png?hash=1174511688",
  "ntpServer": "http://0.europe.pool.ntp.org:80/",
  "supportedLanguages": [
    "en-US",
    "sr-Latn-RS"
  ]
}
```

## Attention

This command is used by POS to verify if E-SDC is available. The command is used prior to Sign Invoice or Send Pin requests. This significantly lowers the possibility of communication errors, including timeout errors. Only if a valid response is received, the POS immediately sends the next command.

## Endpoint

SDC	Endpoint	Example
V-SDC	<V-SDC_API_URL_obtained_from_certificate_as_explink here>/api/v3/attention	[ _TaxCore.PublicConfiguration.VSDCAPI
E-SDC	http://<ESDC_ip_address>:<ESDC_port>/api/v3/attention	http://192.168.88.112:8888/api/v3/attention

**NOTE:**

Development and production environments, as well the environments in different countries, have different URLs. For this reason, URLs and names in your documentation, code and UI should not be hardcoded but configurable or extracted from a digital certificate.

# Method

GET

# Header

Add the following HTTP headers to each request

- Accept: application/json

# Authentication

## V-SDC

V-SDC API does not require client authentication.

## E-SDC

E-SDC does not require client authentication.

# Request

N/A

# Response

HTTP Code 200

# Get Status

This service is used to get status information from SDC.

# Endpoint

SDC	Endpoint	Example
V-SDC	<V- SDC_API_URL_obtained_from_certificate_as_exp <a href="#">here</a> >/api/v3/status	[ __TaxCore.PublicConfiguration.VSDCApi URL ]
E-SDC	http://<E-SDC_ip_address>:<E- SDC_port>/api/v3/status	http://192.168.88.112:8888/api/v3/sta

## NOTE:

Development and production environments, as well the environments in different countries, have different URLs. For this reason, URLs and names in your documentation, code and UI should not be hardcoded but configurable or extracted from a digital certificate.

# Method

GET

# Header

Add following HTTP headers to each request

- Accept: application/json
- PAC: <PAC\_value> (PAC value for the provided client authentication certificate - **only for V-SDC**)

# Authentication

## V-SDC

Use client digital certificate for authentication with each request to V-SDC.Api.

## E-SDC

E-SDC does not require client authentication.

# Request

# Response

JSON formatted data in accordance with the below table.

SDC	Field	Description	Example
E-SDC	<b>isPinRequired</b>	If PIN is not entered, or if a wrong PIN is entered in the previous attempt, this field shall be set to true; otherwise set to false	true
E-SDC	<b>auditRequired</b>	If Audit is required, this field shall be set to true. Audit is required if the Total Amount of all invoices is 75% or more of the Maximum Limit. Maximum Limit and Total Amount are obtained from the Secure element using <a href="#"><u>Amount Status APDU command</u></a>	False if Total Amount is 1554879 Maximum Limit is 9000000  True If Total Amount is 7504899 Maximum Limit is 10000000
E-SDC, V-SDC	<b>sdcDateTime</b>	Current <b>Local Date and Time</b> in ISO 8601 format	2017-08-30T11:53:05+13:00
E-SDC	<b>lastInvoiceNumber</b>	Invoice number of the last invoice signed by this E-SDC.	ORG674J1-ORG674J1-98637
E-SDC	<b>protocolVersion</b>	Always return 1.0.0.0	1.0.0.0
E-SDC	<b>secureElementVersion</b>	Version obtained from the Secure element using <a href="#"><u>Get Secure Element Version APDU command</u></a>	1.1.1
E-SDC	<b>hardwareVersion</b>	Manufacturer-specific hardware version, if applicable	1.2.7.21
E-SDC	<b>softwareVersion</b>	Manufacturer-specific software version	1.7.6.5
E-SDC	<b>deviceSerialNumber</b>	Manufacturer-specific serial number of the E-SDC device	08-0012-ASDJKA1SDJL2A

		in format of the <a href="#">Manufacturer Registration Code - MRC</a>	
E-SDC	<b>make</b>	Name of the manufacturer	Acme
E-SDC	<b>model</b>	Manufacturer-specific Model Name	The Device 442
E-SDC	<b>mssc</b>	Manufacturer-specific Errors, Warnings and info messages	Array of error codes
E-SDC	<b>gsc</b>	General Errors, Warnings and info messages defined in the <a href="#">Status and Error Codes</a> section	Array of error codes
E-SDC, V-SDC	<b>supportedLanguages</b>	List of language-culture strings supported by SDC and intercepted with languages supported by specific environment, as per <a href="#">Get Environment Parameters</a>	en-US; sr-Cyrl-RS
E-SDC, V-SDC	<b>uid</b>	UID of the client certificate (V-SDC) or inserted smart card (E-SDC)	TK7SV2AY
E-SDC, V-SDC	<b>taxCoreApi</b>	Root URL of the TaxCore.API targeted by SDC	<a href="https://api.sandbox.taxcore.dt">https://api.sandbox.taxcore.dt</a>
E-SDC, V-SDC	<b>currentTaxRates</b>	An object of currently active tax rates	An object containing validFrom date, group Id and the array of currently active tax categories
E-SDC, V-SDC	<b>allTaxRates</b>	An array of all tax rates	An array containing validFrom date, group Id and tax categories for each group

## Model

```
GetStatusResponse {
  sdcDateTime (string, optional),
  supportedLanguages (Array[string], optional),
  uid (string, optional),
```

```
taxCoreApi (string, optional),  
  
currentTaxRates (TaxRateGroup, optional),  
  
allTaxRates (Array[TaxRateGroup], optional)  
}
```

## Example for E-SDC

}

```

## Verify PIN

This service is used to verify a PIN entered by a cashier on a POS. Once the PIN is entered, it is validated using the Secure element on a smart card. The request is sent as plain text and the response is plain text (still application/json HTTP header must be provided).

If the command is successfully executed and the PIN is correct, E-SDC shall return "0100" and remember this PIN in its volatile memory (RAM) for all subsequent operations, until the smart card is removed from the reader or the E-SDC is switched off. Therefore there is no need for POS to send a PIN before every operation, only once it receives the response "0100".

However, if POS receives the error code "1500" during its regular operation, it must use this service again to provide a valid PIN (ask the user for the PIN or other way as per the POS internal policy). This case can be due to a card being removed, a card reader or E-SDC malfunctioning, etc.

In order to verify PIN, E-SDC invokes [Pin Verify](#) APDU command and passes PIN to the Secure element.

## Endpoint

SDC	Endpoint	Example
V-SDC	N/A	N/A
E-SDC	http://<ESDC_ip_address>:<ESDC_port>	http://192.168.88.112:8888/api/v3/p

## Method

POST

## Header

Add following HTTP headers to each request

- Accept: application/json
- Content-Type: application/json

# Authentication

## V-SDC

N/A

## E-SDC

E-SDC does not require client authentication.

# Request

String with PIN code sent from POS. PIN can contain only 4 ASCII digits 0-9.

## Example

1234

# Response Data

A string representation of one of the general [Status and Error Codes](#):

- "0100" - command executed successfully and PIN is correct for the inserted card;
- "2100" - PIN code is wrong for the inserted card. Secure element responded with 0x6302 or 0x6303;
- "2110" - The number of allowed PIN entries exceeded. The card is locked for further use and has to be returned to Tax Office. Secure element responded with 0x6310;
- "1300" - E-SDC detects that the smart card is not inserted (or E-SDC fails to connect to it due to card or card reader issues or some other internal malfunction);
- "2220" - E-SDC cannot connect to the Secure Element applet;
- ~~"2210" - Secure Element is locked due to the card limit set by the Tax Service. No additional invoices can be signed before the audit (local or remote) is completed;~~
- ~~"2230" - Secure Element does not support requested protocol version (reserved for later use);~~
- "2400" - SDC device is not fully configured for invoice signing (i.e. tax rates or verification URL are missing etc.)
- "2806" - If provided PIN is in invalid format, other than ASCII digits 0-9.
- "1999" - E-SDC could not verify PIN, but specific case reason is not determined by error codes. Field *message* may contain more description. Manufacturer can use manufacturer-specific codes to describe warning in more details.

For more information consult [Status and Error Codes](#) sections.

## Example

"0100"

# Create Invoice

This section contains the description of the **Create Invoice** command.

This command enables applying a digital signature on the transaction data received from the taxpayer's invoicing system. It provides non-repudiation of the signed invoice, i.e. the taxpayer cannot deny the content of the invoice nor that the invoice was signed using his/her secure element.

## Endpoints

### NOTE:

Development, testing and technical review are all done in the Sandbox environment. The next step is the administrative review process which enables getting accreditation for a specific country. Different countries have different environment names, and every environment has its own URL. See [Environments](#).

SDC	Endpoint	Example
V-SDC	<V- SDC_API_URL_obtained_from_certificate_as_exp <a href="#">here</a> >/api/v3/invoices	[ _TaxCore.PublicConfiguration.VSDCAPI URL ]/api/v3/invoices
E-SDC	http://<ESDC_ip_address>:<ESDC_port>/api/ v3/invoices	http://192.168.88.112:8888/api/v3/invoices

## Method

POST

## Authentication

### V-SDC

Use client digital certificate for authentication with each request to V-SDC.Api.

### E-SDC

E-SDC does not require client authentication.

# Request

## Headers

Add following HTTP headers to each request

- Accept: application/json
- Content-Type: application/json
- RequestId: <RequestId\_value> (Unique identifier of the request, generated by POS system. It is used only for later request search, in case a response was not received. - **optional**). MaxLength: 32
- Accept-Language: <Accept-Language\_value> (The list of one or more languages returned through the field **supportedLanguages** in the [Get Status](#) service response, ordered in POS language preference and separated by semi-colon.)
  - SDC returns Invoice Result in the first supported language from the list
  - if none of the languages from the list are supported by SDC, the SDC returns HTTP status code 406
  - if POS does not submit this parameter, SDC returns Invoice Result in the first language from the list obtained through Get Status service
- PAC: <PAC\_value> (PAC value for the provided client authentication certificate - **only for V-SDC**)

## Invoice

Field	Optional/Mandatory	Description
<b>dateAndTimeOfIssue</b>	Optional	Current <b>Local Date and Time</b> in ISO 8601 format. This is an optional element on the API level. However, tax legislation in certain jurisdictions might mandate including it on invoices - so <b>make sure you become familiarized with the requirements in each jurisdiction.</b>
<b>invoiceType</b>	Mandatory	Invoice Type enumeration value: 0 - Normal, 1 - Proforma, 2 - Copy, 3 - Training, 4 - Advance
<b>transactionType</b>	Mandatory	Transaction Type enumeration value: 0 - Sale, 1 - Refund
<b>payment</b>	Mandatory	List of payments for the invoice, where each payment defines its method and amount. Each invoice must contain at least one payment element.

		<p>In cases when the cashier needs to give change to the customer, the amount submitted in the <code>payment</code> field <b>must be the actual amount that stays in the cash register</b> (not the total amount that was given by the customer to the cashier).</p>
<b>cashier</b>	Optional	Cashier's identification.
<b>buyerId</b>	Optional	Unique identification of the buyer/customer. It is <b>mandatory only if there is a legal obligation for buyer identification</b> (in both B2C and B2B transactions); otherwise, it's optional.
<b>buyerCostCenterId</b>	Optional	Cost Center ID provided by the buyer to the cashier or an identification of the invoice purpose. It is <b>mandatory only if there is a legal obligation for invoice purpose identification</b> (in both B2C and B2B transactions); otherwise, it's optional.
<b>invoiceNumber</b>	Optional	Invoice number generated by a POS <b>or</b> the software version of the accredited POS. This is an optional element on the API level. However, tax legislation in certain jurisdictions might mandate including it on invoices. <b>Make sure you become familiarized with specific jurisdiction requirements regarding its use and content.</b>
<b>referentDocumentNumber</b>	Mandatory for all Copies and Refunds and some Normal Sale or Advance Sale invoices	Mandatory only in case Invoice Type is <b>Refund, Copy or Advance Sale</b> connected to an Advance Sale (other jurisdiction-specific rules may apply). In all cases, this field must contain <a href="#">SDC Invoice Number</a> of the previously issued invoice. In any other case, this field is optional. Must be in the <b>requestedBy-signedBy-Ordinal_Number</b> format. Unicode MaxLength: 50

<b>referentDocumentDT</b>	Optional	<p><b>SDC date and time</b> (local date and time in ISO 8601 format) of the document referenced in the referentDocumentNumber field.</p> <p>It is used to calculate taxes on the date of issue of the original document that is refunded or copied. If it is not provided in the request, SDC uses the currently active tax rates. It can be used only when there is a Reference Number (referentDocumentNumber) on the same invoice.</p>
<b>items (n)</b>	Mandatory	<p>Each invoice contains at least one item in the Items collection (E-SDC should support a minimum of 250, recommended up to 500)</p>
<b>options</b>	Optional	<p>Key/value collection defines the output of E-SDC invoice fiscalization, to optimize resources.</p> <p>Key: <b>omitQRCodeGen</b> Value: "1" to omit QR Code generation by E-SDC and "0" to generate and return QR code to POS.</p> <div style="background-color: #ffcc00; padding: 10px;"> <p>E-SDC <b>MUST NOT</b> submit QR code to the tax authority as part of an audit package.</p> </div> <p>Key: <b>omitTextualRepresentation</b> Value: "1" to omit generation of textual representation by E-SDC and "0" to generate return textual representation to POS.</p> <div style="background-color: #ffcc00; padding: 10px;"> <p>E-SDC <b>MUST ALWAYS</b> submit the textual representation of an invoice (journal) to the tax authority as part of an audit package.</p> </div>

## Item

Each Item represents one line item on the invoice.

Field	Optional/Mandatory	Description
<b>gtin</b>	Optional	Global Trade Item Number (GTIN) is an identifier for trade items, incorporated the ISBN, ISSN, ISMN, IAN (which includes the European Article Number and Japanese Article Number) and some Universal Product Codes, into a universal number space.
<b>name</b>	Mandatory	Human-readable name of the product or service.
<b>quantity</b>	Mandatory	The quantity of an item, with a maximum of 3 decimals. Example: 2 (pieces), 0.100 (grams).
<b>unitPrice</b>	Mandatory	Unit price of the line item. It does not take part in tax calculation. If there is a discount, the displayed unit price should show the price after the discount is applied. It must not include the value of the discount.
<b>labels</b>	Mandatory	The array of labels. Each Label represents one of the Tax Rates applied on the invoice item. Tax Items are calculated based on <code>totalAmount</code> and applied labels as described in the <a href="#">Calculate Taxes</a> section. This field is mandatory (i.e. the caller must submit a non-empty collection) for each item, even when the price is 0.00.
<b>totalAmount</b>	Mandatory	Gross price for the line item - <code>unit price x quantity</code> . If there is a discount, the displayed amount should show the calculated price after the discount is applied to the line item. It must not include the value of the discount.

## Payment

Field	Optional/Mandatory	Description
<b>amount</b>	Mandatory	Decimal amount of the payment
<b>paymentType</b>	Mandatory	Payment Type enumeration value: 0 - Other, 1 - Cash, 2 - Card, 3 - Check, 4 - Wire Transfer, 5 - Voucher, 6 - Mobile Money

## Model

```
InvoiceRequest {
    dateAndTimeOfIssue (string, optional) MinValue: 1900-01-01T00:00:01Z, MaxValue: 9999-12-31T
    cashier (string) Unicode MaxLength:50,

}

```

# Response

## Headers

The following HTTP headers shall be returned in response

- RequestId: <RequestId from Request HTTP Headers>

## Data Fields

Field	Description
<b>requestedBy</b>	UID of client's Secure Element digital certificate.
<b>signedBy</b>	UID of SDC's Secure Element digital certificate.
<b>sdcDateTime</b>	Local date and time in ISO 8601 format provided by E-SDC.
<b>invoiceCounter</b>	Invoice Counter in format <b>transactionTypeCounter/totalCounter</b> <b>invoiceCounterExtension</b> For Example: 14/17NS
<b>invoiceCounterExtension</b>	First letters of Invoice Type and Transaction Type of the invoice. NS for Normal Sale, CR – Copy Refund, TS – Training Sale, etc.
<b>invoiceNumber</b>	SDC Invoice Number in format <b>requestedBy-signedBy-totalCounter</b>

<b>verificationUrl</b>	VerificationURL generated in the <i>Create Verification URL</i> process
<b>verificationQRCode</b>	Base64 encoded byte array of GIF image created in the <b>Create QR Code</b> process
<b>journal</b>	Textual Representation of the invoice created in the <i>Create a Textual Representation of an Invoice (Receipt)</i> process
<b>totalCounter</b>	Total number of invoices signed by Secure Element. Returned by <i>Sign Invoice</i> APDU command
<b>transactionTypeCounter</b>	Total number of invoices for a requested type. Returned by <i>Sign Invoice</i> APDU command
<b>totalAmount</b>	Sum of all Items – total payable by the customer
<b>encryptedInternalData</b>	Base64 encoded byte array returned by <i>Sign Invoice</i> APDU command
<b>signature</b>	Base64 encoded byte array returned by <i>Sign Invoice</i> APDU command
<b>taxItems</b>	Array of TaxItem entities
<b>businessName</b>	Taxpayer Business Name obtained from digital certificate subject field <b>O</b> , as explained <a href="#">here</a>
<b>locationName</b>	Location Name obtained from digital certificate subject field <b>OU</b> , as explained <a href="#">here</a>
<b>address</b>	Street address obtained from digital certificate subject field <b>STREET</b> , as explained <a href="#">here</a>
<b>tin</b>	Taxpayer's tax identification number obtained taxpayer's digital certificate, as explained <a href="#">here</a>
<b>district</b>	District obtained from digital certificate subject field <b>S</b> , as explained <a href="#">here</a>
<b>taxGroupRevision</b>	Revision of taxes used in the calculation
<b>mrc</b>	<a href="#">Manufacturer Registration Code</a> is mandatory for an audit package sent to the tax authority database, but it's optional for invoice response sent to POS. It always has the format <b>ProductCode-ProductVersionCode-DeviceSerialNumber</b> - all 3 elements of MRC are mandatory. Explanation: <b>ProductCode</b> - unique 2 characters received from the tax authority during accreditation - case sensitive. <b>ProductVersionCode</b> - unique 4 characters received from the tax authority during accreditation - case sensitive. <b>DeviceSerialNumber</b> - serial number assigned by the manufacturer for each E-SDC installation - case sensitive (max 32 characters).

<b>messages</b> (optional)	Custom human-readable message that shall be printed or displayed by POS.
----------------------------	--

## TaxItem

TaxItem represents tax liability on the invoice per one tax category.

Field	Description
<b>label</b>	Tax Label (A, F, G, N, P...)
<b>categoryName</b>	Tax Category Name (e.g. VAT, Consumption)
<b>categoryType</b>	Tax Category Type (0 - Tax on net, 1 - Tax on total, 2 - Amount per quantity)
<b>rate</b>	Tax rate percentage for Label (i.e. 12.50%)
<b>amount</b>	Tax amount calculated by E-SDC during invoice fiscalization

## Model

```

InvoiceResult {
requestedBy (string, optional),
sdcDateTime (string),

# Examples

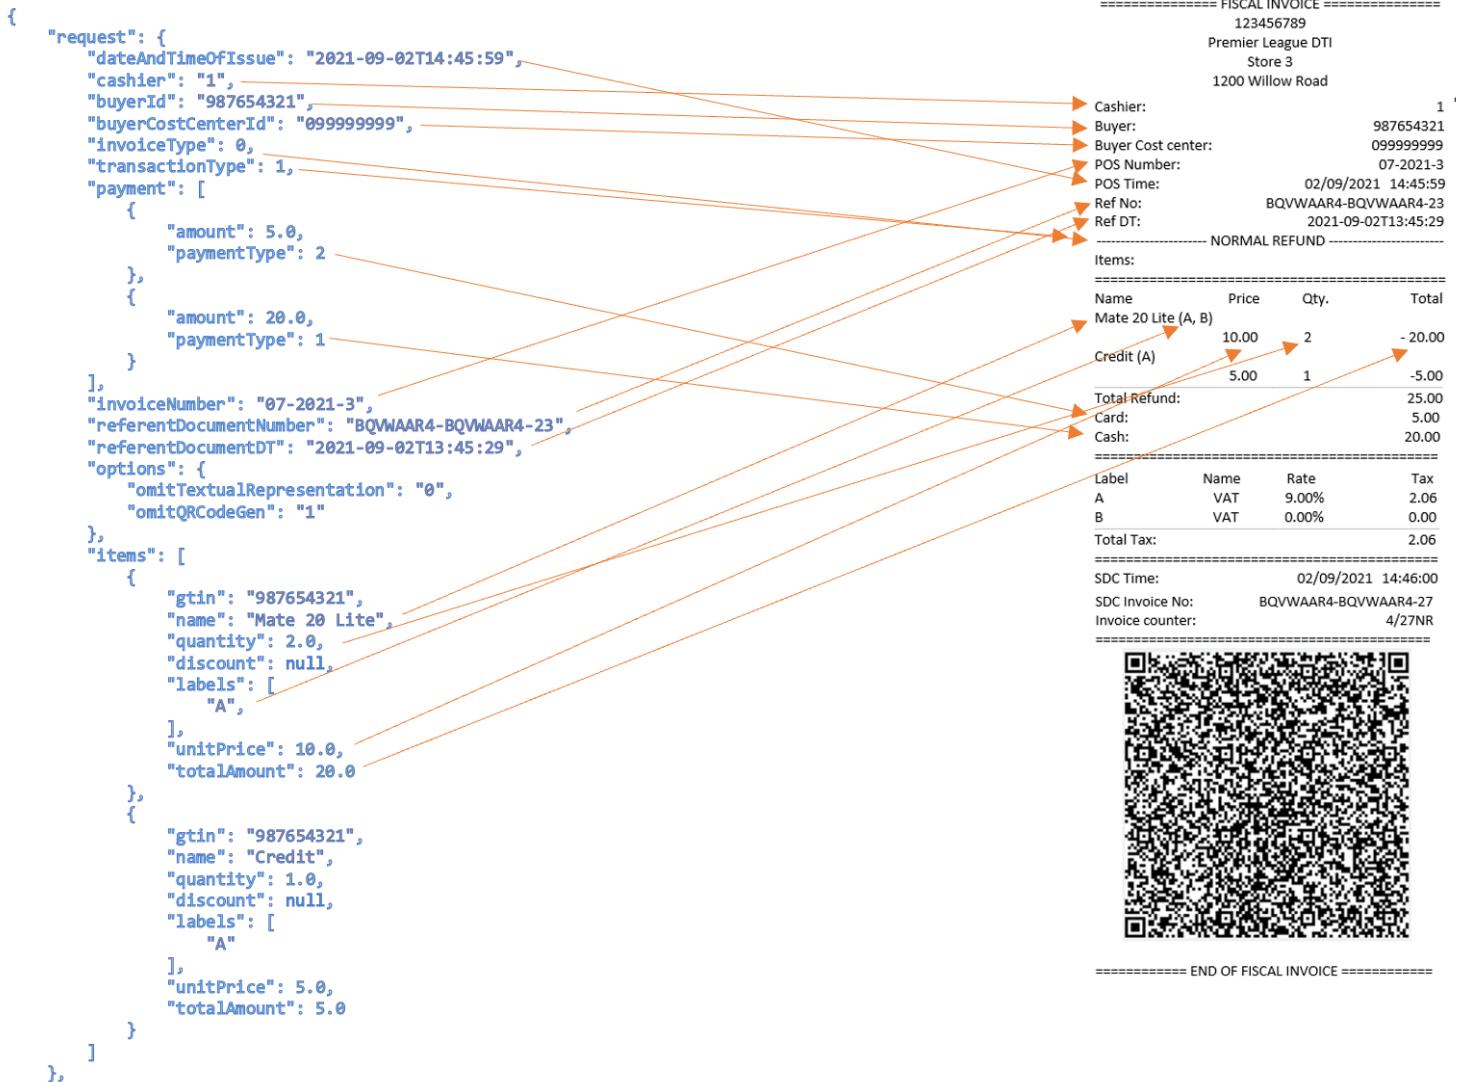

Below are examples of invoice requests and responses for all supported invoice and transaction types:

1. [Mapping](#)  
In case POS does not use Journal (generated by E-SDC or V-SDC) as a content for a fiscal receipt, but it generates a custom-designed receipt instead, it must use the following element mappings:
2. [Normal Sale](#)  
This is an example of Normal Sale Invoice
3. [Normal Refund](#)  
This is an example of Normal Refund
4. [Advance Sale](#)  
This is an example of Advance Sale Invoice
5. [Advance Refund](#)  
This is an example of Advance Refund.
6. [Copy Sale](#)  
This is an example of Copy Sale
7. [Copy Refund](#)  
This is an example of Copy Refund
8. [Proforma Sale](#)  
This is an example of Proforma Sale
9. [Proforma Refund](#)  
This is an example of Proforma Refund
10. [Training Sale](#)  
This is an example of Training Sale
11. [Training Refund](#)  
This is an example of Training Refund

# Mapping

In case POS does not use Journal (generated by E-SDC or V-SDC) as a content for a fiscal receipt, but it generates a custom-designed receipt instead, it must use the following element mappings:

## Get Last Signed Invoice

Get the last signed invoice by `RequestId`. It is used in case POS did not get a response from E-SDC after the [Create Invoice](#) service was invoked. The response is the same as for the Create Invoice service. `RequestId` field from the request is used to determine whether the last invoice was successfully created.

## Endpoint

SDC	Endpoint	
V-SDC	<V- SDC_API_URL_obtained_from_certificate_as_exp <a href="#">here</a> >/api/v3/invoices/{requestId}	[ \$_TaxCore.PublicConfiguration.VSDCApi
E-SDC	http://<ESDC_ip_address>:<port>/api	http://192.168.88.112:8888/api/v3/in

### NOTE:

Development and production environments, as well the environments in different countries, have different URLs. For this reason, URLs and names in your documentation, code and UI should not be hardcoded but configurable or extracted from a digital certificate.

## Method

GET

## Authentication

### V-SDC

N/A

## E-SDC

E-SDC does not require client authentication.

## Request

N/A

## Response

If found, same response structure as the response model for [Create Invoice](#) service. If not found, null is returned.

### NOTE:

The main purpose of the command is to receive information about the last signed invoice, so that in case of failure, POS can decide whether it is necessary to repeat an invoice request. There are various alternative scenarios that may arise from this, which E-SDC should process in accordance with its technical capabilities and capacities, as well as depending on the intended implementation and the guarantees it can offer to POS:

1. If more than one POS is using the same E-SDC, the uniqueness of the RequestId should be ensured at the level of all acceding POS. In this regard, it is recommended to use a GUID with each request, or a combination of `POS_id + request_id`. Also, in this case, the last invoice according to the POS, or one of the last N requests, should be saved, depending on the capabilities of the E-SDC.
2. If one E-SDC is issuing invoices with multiple POSs and multiple Secure Elements, then the E-SDC should store at least 1 latest invoice response for each unique combination of `request_id + secure element UID`. Depending on the implementation, E-SDC can store more than 1 latest responses for each combination.
3. The E-SDC should store this data in a non-volatile memory so that in the event of a failure (e.g. power failure) it can read the stored data.
4. E-SDC should keep this data at least until the next request.

## Error Messages Format

This section describes the structure and format of error messages that SDC returns to POS.

### Data fields

message	Human-readable error information. If unsure which error message to return to a POS, use "The request is invalid" phrase

modelState	Array of objects containing key-value pairs of property-errorCodes .
property	Path to the property error codes are associated with. If some of the fields in the path is an array, index number shall be included in square brackets. If errorcode is not related to a specific JSON property in the request, leave empty string.
errors	Error codes associated with a particular property. Codes are from the section <a href="#">Status and Error Codes</a> .

## Model

```
ModelErrors {
  message (string),
  modelState (Array[ModelError])
}
```

```
ModelError {
  property(string),
  errors(Array[string])
}
```

## Example

```
{
  "message": "The request is invalid.",
  "modelState": [
    {
      "property": "invoiceType",
      "errors": [
        "1234"
      ]
    },
    {
      "property": "items[0].labels[0]",
      "errors": [
        "1234"
      ]
    },
    {
      "property": "items[0].gtin",
      "errors": [
        "1234",
        "5678"
      ]
    }
  ]
}
```

## Status and Error Codes

All protocols share the same Info, Error and Warning codes.

<b>Code</b>	<b>0-Info 1-Warning 2-Error</b>	<b>Description</b>	<b>Applies to</b>
	<b>INFO</b>		
<b>0000</b>	All OK	Command is executed without warnings or errors	VSDC, E-SDC
<b>0100</b>	Pin OK	This code indicates that the provided PIN code is correct	E-SDC
<b>0210</b>	Internet Available	Internet Connection is available (optional)	E-SDC
<b>0220</b>	Internet Unavailable	Internet Connection is not available (optional)	E-SDC
	<b>WARNINGS</b>		
<b>1100</b>	Storage 90% Full	Storage used to store audit packages is 90% percent full. It is time to perform the audit.	E-SDC
<b>1300</b>	Smart Card is not present	Secure element card is not inserted in the E-SDC smart card reader	E-SDC
<b>1400</b>	Audit Required	Total Sale and Refund amount reached 75% of the SE limit. It is time to perform the audit.	E-SDC
<b>1500</b>	Pin Code Required	Indicates that POS must provide the PIN code	E-SDC
<b>1999</b>	Undefined Warning	Something is wrong but specific warning is not defined for that situation. Manufacturer can use manufacturer-specific codes to describe warning in more details	E-SDC
	<b>ERRORS</b>		
<b>2100</b>	Pin Not OK	PIN code sent by the POS is invalid	E-SDC
<b>2110</b>	Card Locked	The number of allowed PIN entries exceeded. The card is locked for use	E-SDC
<b>2210</b>	SE Locked	Secure Element is locked. No additional invoices can be signed before the audit is completed	E-SDC

<b>2220</b>	SE Communication Failed	E-SDC cannot connect to the Secure Element applet	E-SDC
<b>2230</b>	SE Protocol Mismatch	Secure Element does not support requested protocol version (reserved for later use)	E-SDC
<b>2310</b>	Invalid tax labels	Tax Labels sent by the POS are not defined	V-SDC, E-SDC
<b>2400</b>	Not configured	SDC device is not fully configured for invoice signing (i.e. tax rates or verification URL are missing etc.)	E-SDC
<b>2800</b>	Field Required	A field is required (a mandatory invoice request field is missing)	V-SDC, E-SDC
<b>2801</b>	Field Value Too Long	The length of the field value is longer than expected	V-SDC, E-SDC
<b>2802</b>	Field Value Too Short	The length of the field value is shorter than expected	V-SDC, E-SDC
<b>2803</b>	Invalid Field Length	The length of the field value is shorter or longer than expected	VSDC, E-SDC
<b>2804</b>	Field Out Of Range	A field value out of expected range	VSDC, E-SDC
<b>2805</b>	Invalid Field Value	A field contains an invalid value	VSDC, E-SDC
<b>2806</b>	Invalid Data Format	The data format is invalid	VSDC, E-SDC
<b>2807</b>	List Too Short	The list of items or the list of tax labels in the invoice request does not contain at least one element (item/label).	VSDC, E-SDC
<b>2808</b>	List Too Long	The list of items or the list of tax labels in the invoice request exceeds the maximum allowed number of elements (items/labels) or byte size. The maximum values depend on an SDC's capacity for processing invoice requests and can be manufacturer-specific.	VSDC, E-SDC
<b>2809</b>	Secure Element Expired	The digital certificate on the smart card secure element has expired.	E-SDC

## Obsolete error codes

Code	Error	Description	Applies to
<b>2811</b>	Invalid Invoice Type	Value of Invoice Type field is invalid or out of range (replaced with <b>2805</b> )	VSDC, E-SDC
<b>2812</b>	Invalid Transaction Type	Value of Transaction Type field is invalid or out of range (replaced with <b>2805</b> )	VSDC, E-SDC
<b>2813</b>	Invalid Payment Type	Value of Payment Type field is invalid or out of range (replaced with <b>2805</b> )	VSDC, E-SDC
<b>2814</b>	BuyerIdLengthInBytes Length Exceeded	BuyerID field maximum length is exceeded (20 chars) (replaced with <b>2803</b> )	VSDC, E-SDC
<b>2815</b>	BuyerCostCenterId Length Exceeded	BuyerCostCenterId field maximum length is exceeded (15 chars) (replaced with <b>2803</b> )	VSDC, E-SDC
<b>2816</b>	POSIInvoiceNumber Length Exceeded	POSIInvoiceNumber field maximum length is exceeded (20 chars) (replaced with <b>2803</b> )	VSDC, E-SDC
<b>2817</b>	GTIN Length Invalid	POSIInvoiceNumber field length is less than 8 or greater than 14 (replaced with <b>2803</b> )	VSDC, E-SDC
<b>2818</b>	Name Length Exceeded	Name field maximum length is exceeded (2048 chars) (replaced with <b>2803</b> )	VSDC, E-SDC
<b>2819</b>	Name is Required	An item name is required (replaced with <b>2800</b> )	VSDC, E-SDC
<b>2820</b>	Labels Length Exceeded	Label length is exceeded (replaced with <b>2803</b> )	VSDC, E-SDC
